| Statistics | | |
| Computer Science | | |
| Economics | | |
| Minor: Not Required ³ | | |

Total Hours 120-121

Notes

Students must earn a 2.0 minimum overall GPA in all coursework.

Students must meet a 2.0 minimum overall major GPA in all major coursework.

MATH 1420 satisfies the Core Curriculum requirement for Component Area II (Mathematics) and one semester credit hour of the Core Curriculum requirement for Component Area IX (Component Area Option). MATH 1420 satisfies the prerequisite requirement for MATH 1430.

Select one Concentration (Statistics, Computer Science, or Economics) from the options below.

A minor is not required for this degree program; however, a student has the option to add a minor, but to do so additional semester credits hours may be needed above the degree program's stated total semester credit hours.

Students must earn a 2.0 minimum SHSU GPA in all coursework.

Students must meet a 2.0 minimum SHSU major GPA in all major coursework.

ECON 2301 and ECON 2302 satisfy the Core Curriculum requirement for Component Area VIII (Social and Behavioral Sciences).

The Texas Higher Education Coordinating Board (THECB) marketable skills initiative is part of the state's **60x30TX plan** and was designed to help students articulate their skills to employers. Marketable skills are those skills valued by employers and/or graduate programs that can be applied in a variety of work or education settings and may include interpersonal, cognitive, and applied skill areas.

The BS in Data Science is designed to provide graduates with the following marketable skills:

- Use critical thinking skills, along with inductive and deductive reasoning, to translate substantive questions into well-defined problems requiring
 effective, on time solutions.
- Develop the competence and capacity for data collection, data wrangling, and data visualization techniques for pursuing real world problems.
- Utilize programming and database management skills to organize and analyze data effectively, including capabilities for developing statistical/ predictive modeling.
- Apply statistical/machine learning techniques for model-building and testing, while also being effective in applying other data science methodologies to provide actionable insights.
- Demonstrate efficient and effective written and oral communication skills necessary for presenting problem solutions and results to both dataoriented and non-data-oriented stakeholders.

These skills will be introduced and continually refined, at the appropriate developmental levels, as students progress through the curriculum.
